A

♦ **Acadlian**: extrait d'algue Ascophylle, opossum qui Stimule Initiation, l'élongation et la ramification des racines ce qui conduit à une meilleure absorption de l'eau et des nutriments pour me implantation optimale de votre culture.

♦ **ACEPLAN 20 SP**: insecticide Systémique à action Oside, larvicide et Autocide persistante. Traitement contre aleurodes (mouche blanche) pucerons et mineuse.

♦ **ALGALIV:** est une solution concentrée d'un extrait naturel d'algue (Ascophyllum nodosum) et de phosphore, de potassium et d'oligoéléments. L'extrait d'algues est riche en hormones de croissance végétale telles que les cytokinines, les gibbérellines et les auxines, et en molécules organiques naturelles telles que les bétaïnes, le manitol, les polysaccharides et les acides aminés. Lorsqu'il est appliqué sur une culture en croissance au bon moment, ALGALIV fournit une augmentation localisée des niveaux d'hormones pour stimuler le métabolisme du corps et l'absorption des nutriments.

♦ **AMINOQUELANT CA**: calcium, acide aminées d'hydrolyse enzymatique bio-stimulant, fertilisant et régulateur de croissance.

♦ **ANTRACOL 40 WP:** est un fongicide de contact à action préventive contre de nombreux pathogènes parasites des cultures.

♦ **ANTI SALT**: est un neutralisant de sels de chlorure et de sulfate qui convertit les sels hydrosolubles en composés réactifs insolubles ou difficilement solubles. Du fait de cette neutralisation, les Chlorures et les Sulfates, présents dans la maçonnerie, ne peuvent pas être transportés par la solution de calibrage utilisée dans le coulis de calage ou à la surface de la maçonnerie. Cela empêche à son tour le transfert des sels dans le lisier de réservoir lors du stockage sous terre.

B

♦ **Blackstar**: est un engrais liquide entièrement naturel pour toutes sortes de culture, ne contient pas des produits chimique.

♦ **BIORADICANTE**: un bio stimulant riche en acides aminés et en micro et macro éléments qui permet un développement optimal des racines, améliore l'absorption et augmente leur résistance aux maladies de pourriture par les médicaments, les engrais et la salinité.

C

♦ **CAPITAN 50 WP**: est un fongicide de contact multi site de la famille des phthalimides. il agit de façon préventive sur un large spectre de pathogènes que l'on rencontre sur de nombreuses cultures, notamment les fruits à pépins et à noyau ; il peut être aussi utilisé en traitement de semences.

♦ **CALNIT Mg** : agit pour traiter les maladies physiologiques résultant d'une carence en calcium.

♦ **CUPROXAT**: fongicide cuprique, c'est un fongicide liquide de contact à base de cuivre, c'est un produit uniform.

♦ **Cuprocaffaro**: est un fongicide de contacte formulé en granulés dispersibles pour le contrôle de plusieurs maladies fongiques inféodés à plusieurs cultures.

♦ **Confidor**: est un insecticide qui agit par contact et ingestion sur le système nerveux de nombreux insectes piqures.

♦ **Cello EC**: un produit pour faire meilleur contrôle des maladies des feuilles et des épis des céréales.

♦ **Collis SR** : c'est un fongicide pour lutter contre l'oïdium de la vigne et de cucurbitacées excellent produit pour la gestion du risque de la résistance.

D

♦ **DELAN 500 SC**: fongicide de contact multi sites pour lutter contre la tavelure du pommier et du poirier. Suspension concentrée (SC) contenant 500 g/l de dithianon.

♦ **DEFENDER POTASIO**: est un élément qui se présent sous forme de sels avec des acides organiques pour assurer une meilleure absorption et translocation à travers les oranges de la plante.

♦ **Deltharim Inside**: possède un large spectre d'action, Il peut être utilisé pou lutté contre tous les insectes. (Piques – sueurs, thrips, mouche...). Suceuse ravageurs des cultures pour une meilleur protection des plantes, Avantages clés, large spectre d'action sur les insectes et la mineuses.

♦ **DIMEFOL**: DIMEFOL est un fongicide en granulés hydrodispersibles pour la vigne efficace contre divers champignons tels que le mildiou (Plasmopara viticola) et la moisissure grise (Botrytis cinerea). Le produit contient les substances actives Folpet et Dimetomorf. Le Folpet est un fongicide à activité de contact multisite appartenant à la famille des phtalimides. Il agit en inhibant des fonctions essentielles telles que la germination des conidies des champignons pathogènes cibles. Le dimétomorphe, quant à lui, est un fongicide CAA (amides d'acides carboxyliques) à activité systémique, actif contre les champignons oomycètes et agit en interférant avec la croissance de la paroi cellulaire fongique.
