Dans ce travail de recherche, nous avons effectué une étude morpho-sémantique sur les hydronymes dans deux régions de la kabylie : Mekla et Boghni. Nous avons choisi ce thème pour savoir quelles sont les formes et les significations auxquelles sont attachées ces appellations.

Pour détecter ces formes et ces significations, nous nous sommes posés les questions suivantes :

Quelle est la forme des hydronymes rassemblés?

Quelles sont leurs significations? Et quel est le rapport entre chaque hydronyme et le nom qu'on lui a attribué?

Nous nous sommes présentées sur le terrain et nous avons réussi à rassembler 287 noms dans la région de Boghni et 240 dans celle de Mekla.

Notre travail est divisé en deux parties :

Dans la première partie, nous avons fait une étude formelle de ces hydronymes, nous avons trouvé que 7,97% sont des noms simples, 92,03 % sont des noms composés. Concernant la racine : 4,76 % de noms ont une seule consonne, 19,04 % de noms ont deux consonnes, 69,04 % de noms ont trois consonnes, 7,14 % de noms ont quatre consonnes. En ce qui concerne le genre : on a trouvé que 54,27 % sont des noms féminins, 45,73 % sont des noms masculins. Concernant le nombre : 96,20% sont des noms au singulier, 3,80% sont au pluriel. Concernant les emprunts nous avons collecté un nombre important des mots prévenant de différentes langues notamment l'arabe et le français et le latin.

Dans la deuxième partie de notre travail, nous nous sommes intéressées aux significations et aux origines de chaque hydronyme que nous avons pu rassembler et qui nous ont été fournis par des informateurs. Nous avons aussi utilisé les dictionnaires de J.M.Dallet, M.A.Haddadou et M. Taïfi. En étudiant les significations de ces hydronymes, nous avons remarqué qu'il y'en avait qui ont un rapport avec les noms de familles et de personnes 24,66%, 16,31% ont un rapport avec la flore, 12,52% ont un rapport avec l'eau, 6,82 %

ont un rapport avec la forme et la couleur 6,26 % ont un rapport avec l'habitat, 5,88 % ont un rapport avec la géographie, 5,16 % ont un rapport avec la religion, 4,55% ont un rapport avec

les reliefs, 4,36% ont un rapport avec les animaux, 1,70% ont un rapport avec l'histoire, 11,95% nous n'avons pas pu établir un lien entre ce que nous avons récolté de la part de nos informateurs et les différents dictionnaires que nous avons utilisé pour un éventuel classement.

En fin, vue l'importance de ce domaine «hydronymie», non seulement dans la dialectologie amazighe, il est relié à plusieurs domaines tel que la linguistique, la littérature et la sociologie. Nous pensons qu'il serait intéressant qu'il y ait des études plus pointueuse à ce sujet.
