❖ **Agzul s tutlayt tafransist :**

Introduction :

Notre travail porte sur l'étude linguistique de l'hydronymie de la commune de Mkira.

Après avoir recueilli le corpus nous avons constaté 316 hydronyme ; dont 28 mot simple, et 291 mot composé.

Après avoir fait l'étude morphologique lexicale et sémantique sur notre corpus d'hydronymie, nous pouvons conclure que :

I. Analyse morphologique :

Dans l'étude morphologique, nous avons marqué que les mots qu'on recueilli ont deux types :

I-1) Les mots simples : chaque mot a une modalité obligatoire.

A) Le genre : masculins/ féminins

- **Les noms masculins :**

En berbère ils commencent par une voyelle (a, i, u).

Ex : asif, amdun, iyzer

- **Les noms féminins :**

En berbère sont marqués par l'ajout du morphème discontinu (t....t) au nom masculin.

Ex : taewint, tamrujt.

- Le morphème (t....a)

Ex : tala

B) le nombre :

B-1) le pluriel interne : C'est les changements qui affectent l'intérieur du nom

Ex : Ajeebub → ijeebab

B-2) Pluriel externe : par l'ajout d'un affixe

Ex : amdun → imdunen

Taewint → tiawinin

B-3) Pluriel mixte : C'est l'association des deux premiers types.

Ex : tala → tiliwa

C) l'état :

C-1) L'état libre :

Ex : iyil, agni

C-2) L'état d'annexion : c'est la modification qui affecte la voyelle initiale du nom à l'intérieur de la phrase.

Ex : iyil → yiyil

Tamda → temda

Taewint → teawint

➤ Parfois le nom ne connaît aucune modification, cela est appelé « syncrétisme d'état »

Ex : Lbir

I.2. Analyse lexicale :

Les procédures de formation essentielles de nouvelles unités sont la dérivation et la composition.

1) La dérivation : il y a deux types de dérivation :

1-a) la dérivation d'orientation :

Ex : tala n rwibeḥ → ra + W + beḥ

1-b) la dérivation de de manière :

Ex : xrez → axxerraz

2) La composition : Il ya deux types :

2-a) la composition proprement dite : Les éléments de ce type sont soudé.

Ex : mageraman → magar + aman

2-2) **La composition synaptique :** L'association de deux mots ou plus avec une préposition

Ex : tala n ccix → tala + n + ccix

2-3- **Le genre des noms composé :** le genre des noms composé est le genre du premier mot.

Ex : Tala n twizet (féminin + n + féminin)

2-3) L'état des noms composés :

L'état des noms composé est l'est du premier nom en sa forme première.

Ex : Amdun n yizgaren (Etat libre) → Umdun n yizgaren (Etat d'annexion)

I.3. L'emprunt :

Le berber connait depuis longtemps le phénomène de l'emprunt linguistique, Latin, Punique, Français . Mais de tous les emprunt, l'arabe est plus important.

-Les emprunt arabe : lḡamee, læec, ccix

-Les emprunt Latin :afalku, ulmu

-Les emprunt punique : ayanim

➤ **II. L'analyse sémantique : Les relations sémantique :**

II.1. Relation h'érarchie et d'iclusion :

II.1.1. Relation hyponymie et hyperonymie :

Ex : Tala → Tala n rgal, tala n læec, tala n ufalku.

II.1.2. Relation partie-tout :

Ex : Taewint n ufalku → Iyzer bu rric

II.2. Relation d'équivalence et d'opposition :

II.2.1. La synonymie :

Ex. Leinṣer n wedyaḡ → leinṣer n uzru

II.2.2. L'antonymie

Ex : Taewint yehman → taewint taṣemmaḍt

II.3. Métaphore :

Ex : Tamda n welyem (par-rapport a sa forme).

II.4. La polysémie

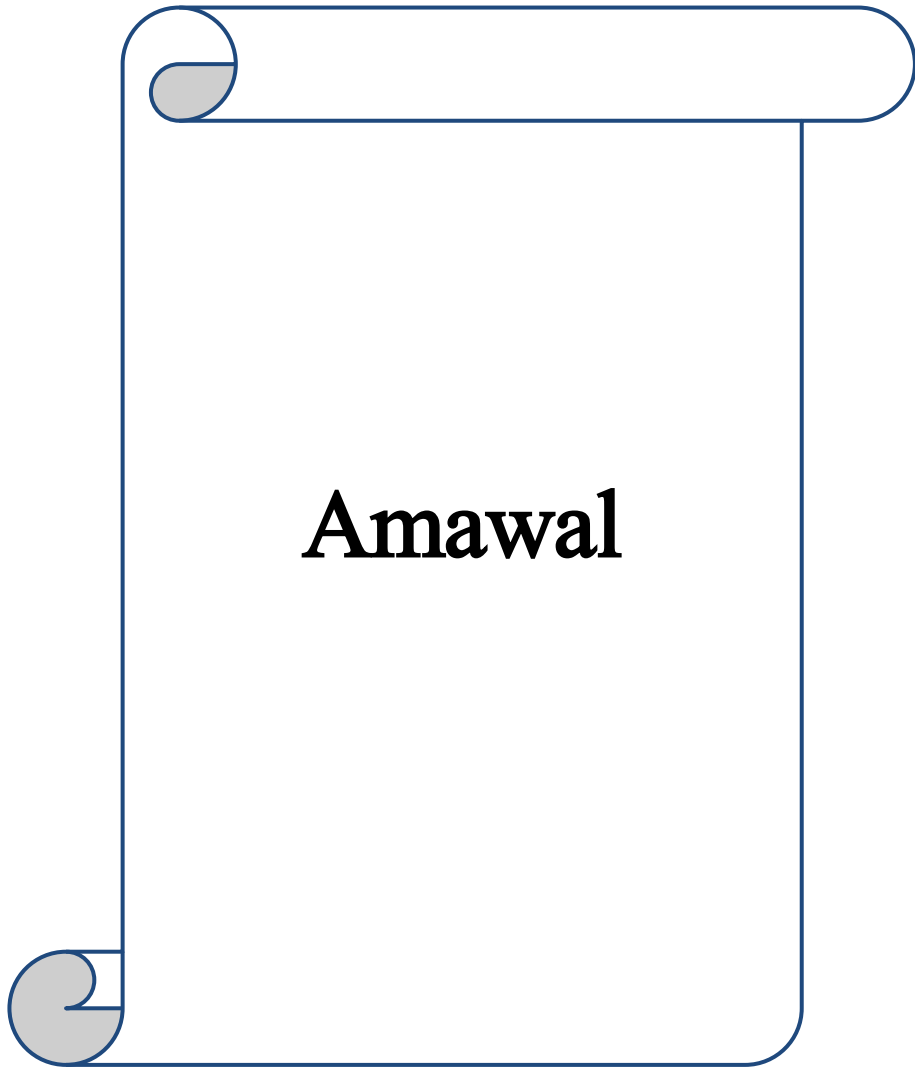

Ex. Lbir amelḥan

- Melḥit waman (d aman yesēan lmelḥ)
- Melleḥ wudem-is (yecbeḥ)
- Melleḥ wawal-is (yessen ad yehder)

Conclusion :

Notre corpus contient 316 hydronymes, dans la commune de M'kira.

Nous avons constaté sur le plans morphologique que le nombre des noms composé est plus élevé par rapport au nombre des noms simple.
